

Creating conditions for a coherent and connected Open Science infrastructure landscape

- Start conference SPII programme; July 1, 2026

Programme

- 12.00 – 13.00 Walk-in & lunch
- 13.00 – 13.50 Plenary session
- Pause
- 14.00 – 15.00 Break-out groups
- Pause
- 15.30 – 16.30 Plenary session
- 16.30 – 17.30 Drinks
- Opening plenary session:
 - Introduction (Darco Jansen)
 - OSNL infrastructure calls (Marta Teperek)
 - Reference model (Maurits v.d. Graaf)
 - Work method break-outs (Nida van Leersum)
 - Mentimeter questions and discussion
- Closing plenary session:
 - Presentation and discussion results breakouts
 - Actions and next steps
 - Mentimeter questions and discussion

Introduction to SPII

- By Darco Jansen (UNL)

National Open Science Ambitions

- 2022 End National Program Open Science (NPOS)
- All parties agree with 2030 ambitions: Open Science 2030 in the Netherlands - NPOS2030 Ambition Document and Rolling Agenda
- Make Open Science possible through Open Infrastructures
- 2023 Regieorgaan Open Science (OSNL) - NWO
- Incentive financing, also for open infrastructures (work programme)
- 2023 Landelijk Bestuurlijk Overleg (BO) open science
- 16 covenant parties: OCW, NWO, UNL, NFU, VH, SURF, KNAW, NWO-I, DANS, eScience Center, 4TUResearchData, Health-RI en SHB
- BO aims to facilitate the strategic dialogue at the national level

Many investments in OS-infra

- Investments primarily from scientific disciplines
- both locally and in (inter)national partnerships
- e.g., via sectorplannen, via umbrella organizations
- European Investments like EOSC, ERICs, dataspace
- Memberships in Large European Infrastructures (portfolio)
- Subsidies mostly as kick-offs / short- or long-term impulses
- Regieorgaan OSNL
- Groeifonds, e.g. Health-RI
- GWI

Towards a reference model for a coherent and connected Open Science infrastructure landscape

- The responsibility to structurally embed Open Science practices within their organizations and among their employees lies with the knowledge institutions (and their umbrella organizations/associations).
- Necessity of an integrated vision: how do we ensure that these investments are well aligned and can be sustainably continued?
- SPII: Strategic Plan for Integrated Infrastructure for Open Science.

Stepping stones towards SPII

- Summer 2024 - project idea: apply for grant or joint effort?
- November 2024 – BO: agreement to develop joint project
- February 2025 – BO: agreement on initial project plan
- March 2025: developed project plan
- Mid-July 2025: delivery of Part 1
- August-September 2025: public consultation / national meeting 11-9-2025
- Oktober 2025 – BO: discussion on feedback en priorities next phase
- 26 November 2026: dicussion with main stakeholders on next phase
- 2 February 2026 – BO: agreement to start with next phase
- April 2026 – SPII 2026 started

Conditions for SPII 2026

- Inclusive – community approach
- Also in English
- Keep it practical
- Collaborative for existing infrastructure and new projects
- Not too abstract – understandable – inviting
- For now, the same steering group but a larger project group
- Explicitly connected to the broad scientific field

SPII programme organisation

- Core group members
- Till Bey; SURF
- Maurice Vanderfeesten; SURF
- Jason Maassen; eScience Centre
- Marcel Ras; VU
- Patris van Boxel; DANS
- Bolinda Hoeksema; SHB
- Joost Elshof; VH
- Louise Bezuidenhout; UL/CWTS
- Josefien Schuurman; UvA/HvA
- Sander Bosch; VU
- Nida van Leersum; programme co-lead
- Maurits van der Graaf; programme co-lead
- Steering group members:
- Darco Jansen; UNL, chair
- John Doove; SURF
- Sarah Coombs; VH
- Frans Oort; UvA

Recap SPII results 2025

- Maurits van der Graaf

Why an Open Science infrastructure and what is it?

- Why? Make Open Science possible and easy
- What is it? The Open Science perspective on digital research infrastructure
- Many of the existing infrastructures facilitate already Open Science
- An integrated Open Science Infrastructure provides connection & cohesion and fills in gaps

Additional use-cases such as CS or OER → possible elaborations for the reference model

- Tech developments check: what are the effects of AI and decentralisation developments?
- Organisational aspects:
 - Governance
 - Organisation
 - Finances
 - Discovery
 - Research information
 - Research administration & funding
 - Research tools
 - Research data management
 - Research software management
 - Publication & communication
 - Reference model
- Connection & collaboration infrastructural development projects (OSNL, TDCC, ...)
- In SPII 2025, we identified 7 types of infrastructures

Approach SPII 2026: ☒ Developing a reference model

Ambitions Open Science

Initiatives Open Science infrastructure

Evaluatie: Nederland behoort met Open Science NL tot internationale koplopers

11 juni 2026

CERN to host Europe's flagship open-access publishing platform Open Research Europe

26 March 2026

The European Organization for Nuclear Research (CERN) has been selected to host a new phase of Open Research Europe (ORE), supported by the European Commission and a new funding consortium of European national funding agencies and research organizations. NWO recently joined this consortium.

45 projects strengthen Dutch open science infrastructure

16 December 2025

In its largest funding round to date, Open Science NL awards 45 projects that strengthen infrastructure for open science in the Netherlands. The projects make scholarly data, software and publications more accessible and help make science more accessible, transparent and inclusive.

OPEN SCIENCE NL

Work programme 2026-2027

 **OPEN**
SCIENCE
NL

Reference model for Open Science infrastructure

- Reference model for Open Science infrastructure
- Guiding principles
- Landscape model
- Shared terminology
- Interoperability framework
- Preconditions
- Current and target situation
- Collective actions
- Why change?
- What we are doing

Focus and choices proposed for 2026

- Development of the reference model for technical aspects (July – December)
- Development of models for governance, organisation and finances in November

Development of the reference model for the technical aspects

- Development together with stakeholders
- Interactive with broad consultation
- Alignment with existing infrastructures and infrastructures in development (OSNL-projects, TDCC-projects, EOSC-NL node, ...)
- Additional use-cases such as Citizen Science, Open Educational Resources and others to further inform and shape the reference model

Why a reference model?

- Basis for working together
- Support development
- Tool for impact analysis
- A common language
- Identify areas of collaboration
- Reuse solution patterns
- Who works on what?
- Mapping of existing state
- Identify gaps and opportunities
- Steering towards goal state
- Exposure to risks
- Consequences of decision
- Uncover dependencies

Our proposal for the content of the reference model

- Values & principles
- Landscape overview
- Shared terminology
- Interoperability framework
- Components
- Why?
- Exposure to risks
- Consequences of decision
- Uncover dependencies
- Who works on what?
- Identify gaps and opportunities
- A common language
- Reuse solution patterns
- Identify areas of collaboration
- Steering towards goal state
- Make it actionable
- Self assessment tool (versions of the tool to be developed and tested along the way)

Proposed approach to develop the reference model

- Values & principles
- Landscape overview
- Shared terminology
- Interoperability framework
- Additional
- use-cases
- Reference model Open Science Infrastructure
- Focus this conference
- July
- Aug
- Sept
- Oct
- Nov
- Dec
- Feb 10
- Jan
- Review & discuss reference model as a whole - workshop at Open Science Festival (14 Oct; submitted)
- Additional workshops t.b.d.
- Interim report
- Next steps conference February 10
- Dedicated workshop
- Dedicated workshop
- Workshop CS
- Workshop OER
- Online consultation
- Self assessment tool test

Values & principles – questions for the break out groups

Values & principles for an integrated Open Science Infrastructure what we prepared

- Quality and integrity
- Collective benefit
- Equity, fairness, diversity & inclusion
- Interoperability
- Values UNESCO as starting point
- Openness
- Autonomy
- Sustainability
- Guiding principles for OSI
- Seamless user-experience
- Transparent processes
- ...
- Enduring access and availability
- Subprinciples
- Reuse open standards
- Develop all software as open source
- ...
- ...
- Enablers/ practices/ [consequences/ actions]

Break-out groups

- Questions:
- Add or change the principles and subprinciples
- What are the potential enablers/practices supporting the (sub-) principles?
- Any other comment
- Practicalities:
- 7 per group
- Handout and worksheet available
- This room and room 2.01 (max 3 groups) or spaces in the corridors
- Restart here at 15.30h for plenary discussions
