

RESULTS MENTIMETER STARTCONFERENCE SPII; JULY 1, 2026

Maurits van der Graaf ; 6-7-2026

CONTENTS

Plenary session at the start Mentimeter questions	1
Attendees representing infrastructures	1
1. Which infrastructure are you working on/do you represent?.....	1
Current challenges for an Open Science infrastructure and the proposed reference model	2
2. What are the current challenges creating a coherent and connected Open Science infrastructure landscape?	2
3. Which proposed component of the reference model seems most valuable to you?	2
Closing plenary session mentimeter questions	3
4. Participants' contribution	3
5. Beyond a reference model, what other expectation or needs do you have regarding an coherent Open Science infrastructure?	3
6. Do you have additional suggestions or remarks or suggestions for Next events?	4

PLENARY SESSION AT THE START MENTIMETER QUESTIONS

ATTENDEES REPRESENTING INFRASTRUCTURES

1. WHICH INFRASTRUCTURE ARE YOU WORKING ON/DO YOU REPRESENT?

59 participants responded to this question. More than 1 answer was allowed. The answers were categorised if possible. According to this categorisation, the results were as follows:

- Publication infrastructures:
 - 6 related to CRIS systems/DURF project
 - 6 publication and communication infrastructures
- Disciplinary infrastructures: 12
- RDM and RSM
 - 13 RDM
 - 2 RSM
- Governance, communication and policy making:
 - 3 Open Science communities
 - 4 General
 - 1 governance
 - 3 policy making
- Research infrastructure as a whole: 6
- Other categories:
 - 2 hardware

- 3 Open Research Information

See for the full answers: [Which infrastructure are you working on or do you represent.xlsx](#)

CURRENT CHALLENGES FOR AN OPEN SCIENCE INFRASTRUCTURE AND THE PROPOSED REFERENCE MODEL

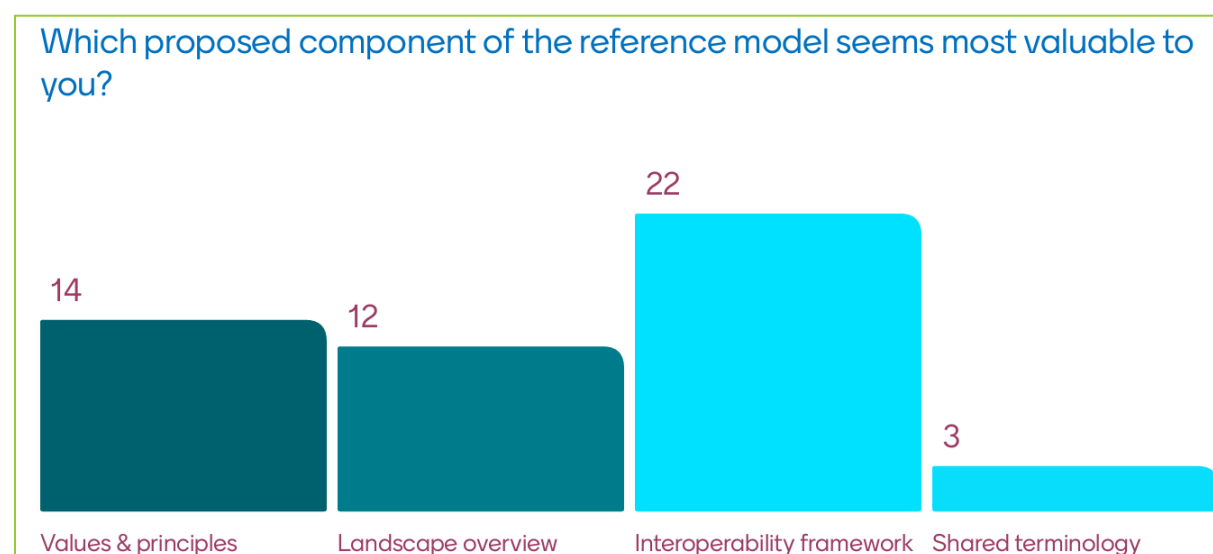

2. WHAT ARE THE CURRENT CHALLENGES CREATING A COHERENT AND CONNECTED OPEN SCIENCE INFRASTRUCTURE LANDSCAPE?

In total 72 answers were given by the attendees. The answers were categorized if possible. According to this categorisation, the results were as follows:

- Governance and sustainability:
 - Governance: 22
 - Sustainability: 11
- Interoperability and connecting infrastructures:
 - Connecting infrastructures: 13
 - Interoperability: 6
- Users and usage: 6
- Closed software: 2
- Terminology: 2
- Security: 3

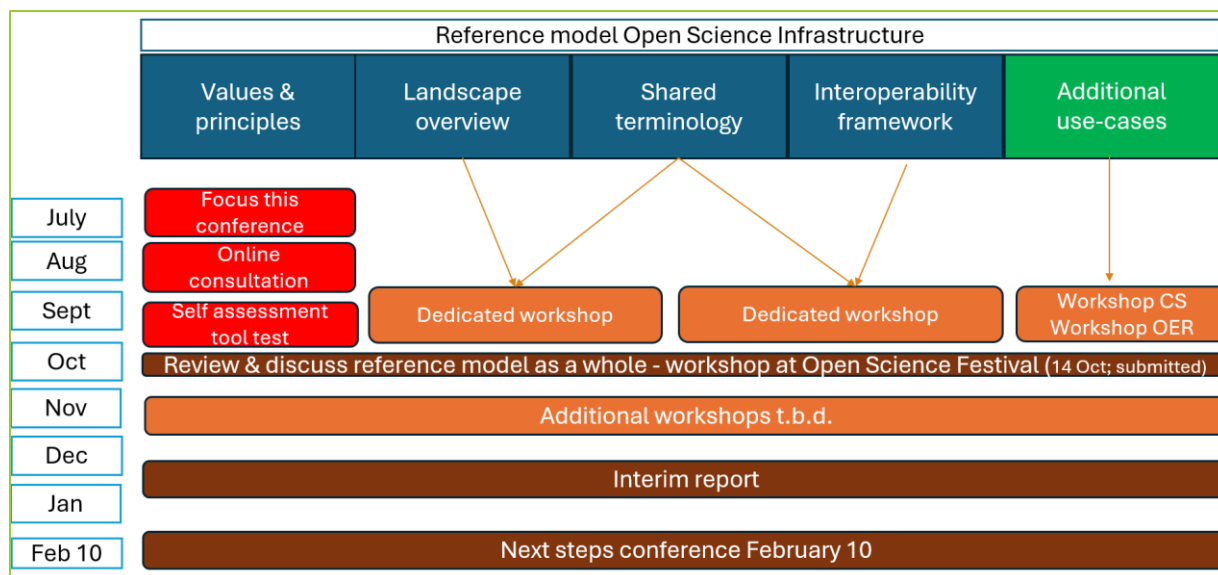

See for the full answers: [What are the current challenges creating a coherent and connected Open Science landscape.xlsx](#)

3. WHICH PROPOSED COMPONENT OF THE REFERENCE MODEL SEEMS MOST VALUABLE TO YOU?

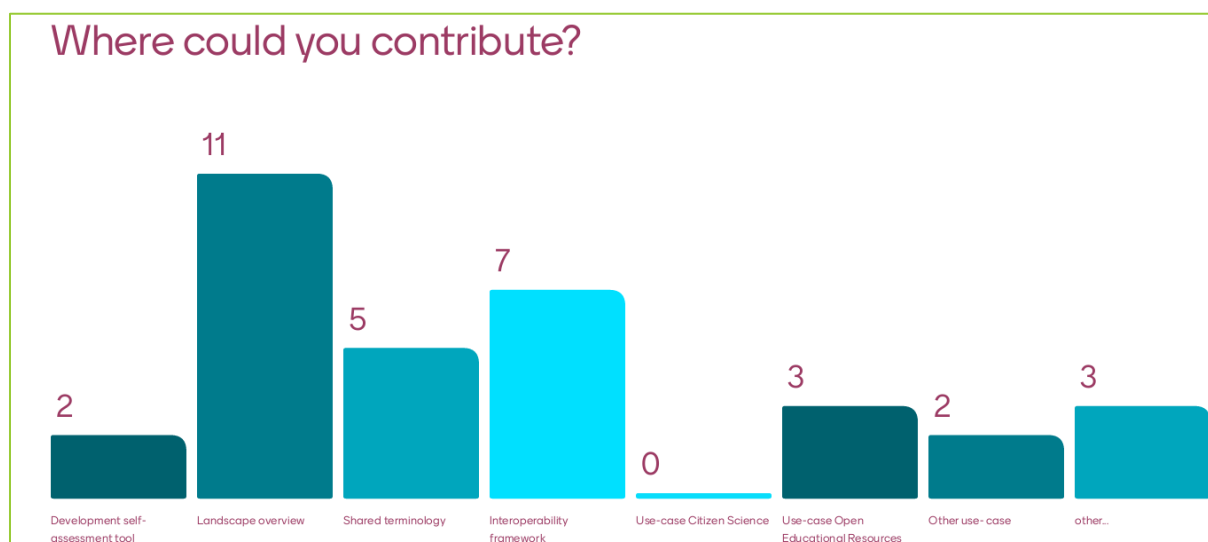

CLOSING PLENARY SESSION MENTIMETER QUESTIONS

4. PARTICIPANTS' CONTRIBUTION

The above schedule was shortly discussed in the closing plenary session. The main comments were that it looked 'doable'. In the following Mentimeter question, the question was asked where the participants could contribute.

The landscape model, the interoperability and shared terminology scored highest.

5. BEYOND A REFERENCE MODEL, WHAT OTHER EXPECTATION OR NEEDS DO YOU HAVE REGARDING AN COHERENT OPEN SCIENCE INFRASTRUCTURE?

This question generated only 10 answers:

A clear governance model
A framework for engagement
Best practices
It just works
Organisational interoperability for collaboration using the infrastructure
Principles that ensure user value
Reference architecture -> fit gap analysis with existing infrastructure -> project plans to develop infrastructural components that fill the gaps -> budget/ finance plans to carry out those projects.
Safety for respondents and researchers as well as data as pre-condition
Sustainable funding

6. DO YOU HAVE ADDITIONAL SUGGESTIONS OR REMARKS OR SUGGESTIONS FOR NEXT EVENTS?

The answers could be categorised as follows:

Conference topic:

- Focus on one area: organize research data
- Please convince me that we need additional principle harmonizing work given that the universities have already signed off the NPOS principles.
- Relation with EOSC(-NL) should be addressed
- This session did not help me for the osnl project
- We have discussed the principles for years already. Focus on use cases and implementation.
- Too abstract

Consultation:

- Don't limit review & discussion of the reference a modem as a whole to the Open Science festival only!
- Invite researchers
- More connection to information managers in organisations - they know the best what the researchers needs are
- More connections with research infrastructures broader than open science infrastructures
- Ownership: invite other to organise the workshops PLUS ownership on consultation (let them add questions to their network) AND on self-assessment tool questions to be incorporated relevant to their

Organisation:

- 1 or 2 show cases of running projects. Short pitches.
- Bigger capacity
- Bigger room!
- Use Lego Serious Play to take on specific scenarios and use cases

Preparation:

- Announce inspraak moments earlier. Explain things better. Send a document with a proper management summary. Explain the connection with our OSNL project. We are not here to check your inspraak boxes
- Send questions for attendees to share within their organisation before the meeting to collect input

- Show examples of the researcher journey process, interacting with internal and external systems
- Work definitions, boundaries of the terms Values, Principles, etc. (preferably with examples)
